- *Nutrition*
- *Health, Vitality & Wellbeing*
- *Detoxification*

Body Wellness

...make it your business

The rapid growth of the beauty industry has made it vital for businesses to expand the services they offer and provide customers with a complete beauty and wellness experience.

The Medec range of Body Wellness products enables the beauty and spa therapist to measure, assess, stimulate and monitor an individual's energy and wellbeing. A well balanced and energised person not only feels well, but also looks radiant and beautiful.

Assessment Calorie-Fit

The Calorie-Fit is a computer operated device that analyses a person's breathing to provide the following information:

1. Measure a person's daily calorie expenditure.
2. Assess the amount of fat calories expended.
3. Provide recommendations to address individual metabolic issues.
4. Provide nutritional information.

Stimulation BRS (Bioresonance System)

Slow metabolism and lack of fat burning are two key factors that prevent weight loss. Both of these issues can be assisted using the stimulation of the Medec Bioresonance System (BRS).

All of the energy required by the human body is manufactured within the cells. If the body's cells do not manufacture enough energy, a feeling of lethargy often occurs and weight loss is more difficult.

Regular use of the BRS helps to:

1. **Increase metabolism,**
2. **Increase blood circulation,**
3. **Improve health and wellbeing**

Stimulation Medec Detox

Not enough sleep, irregular and unhealthy meals, stress at work and lack of exercise contribute to toxification of the body and lack of energy.

The Medec Detox provides clients with energy stimulation and rejuvenation, using the ancient philosophies of Roman Baths and Spas. Modern technology is used to electronically create water which is rich in ionized minerals. A regular foot spa, using the Medec Detox, can provide the body with a greater ability to eliminate accumulated toxins and stimulate regeneration and wellbeing
